INTERNATIONAL SCHOOLBUILDING NEWS

INTRODUCTION

This number of International School Building News is given up for a large part to the activities of the Unesco-supported School Building Centres in Latin America and Africa.

The extensive research and building programmes entered upon by these centres caused the editors of International School Building News to decide to pay attention to some aspects of this work. We should have liked to include in this number the activities of School Building Institutes in Asia. The recent moving of this institute was one of the reasons that we possessed insufficient data on it when we prepared the present number of our News for the press. We may be able to return to the activities of this institute in one of the next numbers of the International School Building News.

The editors

CONTENTS
