**INTERNATIONAL
SCHOOLBUILDING NEWS**

٢ - اقساط ١٩٦٧

INTRODUCTION

This number of International School Building News is given up mainly to information on the United Kingdom. We decided it would be a good idea to collate news of the different aspects of the developments in school building which are taking place in this country, into one issue. The plans for raising the school leaving age and the changes in school organisations have far-reaching structural consequences. A number of examples of concrete proposals for a solution to the problems is given in the first chapter.

International School Building News has entered its third year. The many reactions, contributions and contacts resulting from the I.S.N. have convinced us that the International School Building News stimulates the exchange of experience and data in the field of school building. The number of its readers grows steadily ; at present , the I.S.N. is sent to 60 countries all over the world. We trust that you are prepared to co-operate in continuing this exchange of data and are looking forward to your contributions with interest.

Since 1954
